

Ovivo® Jones & Attwood Screw Compactor

High quality stainless steel construction.

Robust screw operating in a perforated plate trough.

The dewatering screen is cleaned automatically by the spiral mounted brush.

Exclusive, steady bearing fitted at the discharge and compaction end of the screw.

High capacity mech/elec drive system with ample overload capacity.

OFFERING

The image at right is of 'Duty' and 'Standby' machines, the screw diameter of these machines is 300 mm. Machines of 150, 200, 300, 400 and 500mm diameter screw are available.

Corresponding capacities are approximately 27, 64, 176, 230, and 318 ft³/hr of wet screenings.

APPLICATIONS

A RANGE OF OUTLET CHUTE ARRANGEMENTS TO SUIT MOST COLLECTION METHODS

The Ovivo Screw Compactor is suitable for screening from inlet or sludge screens and is available in a range of sizes from 150mm to 500mm diameter. The largest machine can process up to 318 ft³/hour of screenings.

Screenings can be delivered to the screw compactor by conventional conveyor systems or by the more efficient washed launder method. The screw compactor can also sit directly beneath the screen discharge and process the solids immediately at the screen. Drainage of the liquors from resulting from the machine/s are diverted to the works drainage system or directly back to the incoming flow of effluent.

The Ovivo® Screw Compactor incorporates the original Jones+Attwood™ features that have a proven record of reliability and robustness.
