

“ Immediate 25 % reduction in overall potable urban water use ”

California Governor Jerry Brown | Executive Order

Drought & Water Scarcity

With serious drought and water scarcity issues plaguing various regions throughout the world, the entire perception of water is changing. The prospect of uncertain fresh water supplies has been a sobering reality for many communities, bringing reuse front and center to the water conversation. Once underappreciated and undervalued, recycled water has become a new and viable resource for irrigation, groundwater re-charge, industrial use, and potable reuse.

Membrane bioreactor (MBR) technology is playing a critical role in solving water scarcity issues due to its high effluent quality, compact footprint, and cost savings. microBLOX™ is an extremely versatile treatment platform that can meet numerous design demands including decentralized, scalping, or packaged plant requirements.

4 zone microBLOX™

Cost Savings

Ovivo's MBR plant designs focus directly on the needs and demands of its customers to lower overall costs. From construction costs to operating expenditures, many factors contribute to the lifetime cost of a wastewater treatment plant. Key benefits of microBLOX™ technology that help bring down costs include:

Quick delivery

Lower construction costs

Ready-to-Operate

Lower total system energy demand

Small footprint

Lower operational costs

Reuse Applications

A diverse experience in reuse applications has made Ovivo well suited to address today's most pressing reuse challenges. Ovivo has provided reuse solutions for a wide variety of applications, some of which include:

Golf Course Irrigation

Irrigation for Resorts

Cruise Ship Transfer Centers

Industrial Reuse
